Investment strategy

A responsible selection of Eurozone equities based on proprietary ESG analysis
Sycomore Sélection Responsable is a core, conviction-driven sustainable investment fund. It invests in equities from the eurozone (up to 10% outside the eurozone) without sectoral or geographic restrictions and without a structural style bias. This selection process is based on a proprietary financial and non-financial fundamental analysis (SPICE model). It thus selects companies that benefit from sustainable development opportunities and whose market valuation does not reflect their intrinsic value. The fund aims to deliver a net-of-fees return that outperforms the MSCI EMU Net Return* benchmark index over a minimum five-year horizon, while maintaining a weighted average SPICE score higher than the weighted average SPICE score of the initial universe.

Fund commentary

With global equity markets under pressure overall, stock dispersion remained very high in October, with energy and defensive sectors (healthcare, utilities, staple consumer spending) trending upwards, and other more cyclical and financial segments lagging somewhat (banks, luxury, semiconductors). In this environment, our approach, based on positioning our portfolio across sectors and companies likely to deliver robust earnings growth (with potential upward revisions) in 2026 and 2027, while keeping an eye on valuations, comes across as the best suited to generate positive returns over coming months. To this end, we initiated new positions in Leonardo and ABN Amro (despite continued caution on the banking sector) and strengthened our exposure to Siemens Energy after the stock's 30% drop since the spring.

Sustainable development goals exposure

This graph represents the main exposures to the United Nations Sustainable Development Goals. Exposure is defined as the opportunity, for each company, to contribute positively to reaching SDGs, providing their products and services. This exercise doesn't aim to measure the companies' effective contribution to SDGs, which is computed through our societal contribution (CS) and net environmental contribution (NEC) metrics.
A company may be exposed to several SDGs to varying degrees: strongly aligned, aligned, neutral, not aligned, or strongly not aligned. The methodology is based on data provided by MSCI.
For more details, our annual SRI report is available in our ESG documentation.

No significant exposure : **61%** *% of companies with no exposure (neutral)*
Non-alignment : **7%** *% of companies misaligned or strongly misaligned*

ESG follow-up, news and dialogue

Dialogue and engagement

Banco Santander
During talks with Santander, we discussed how the ONE Transformation plan and the deployment of AI would impact labour. In Spain, restructuring plans are based on social dialogue, unlike in the UK or the US where the emphasis is more on attrition. The group has remained rather vague on redeployments and departures. Reliance on AI is expected to generate gains of €1 billion over 3 years, but the impact on labour, skills and governance is yet to be specified.

Thalès
We engaged Thalès as part of an investor coalition to discuss the use of their products and their impact for human rights.

ESG controversies

Roche Holding
On October 8th and in agreement with the European Medicines Agency, Roche Holding sent a Direct Healthcare Professional Communication regarding a new risk of drug-induced liver injury associated with Ocrevus, with new surveillance recommendations. In its reply to our question, the company stated that there should be no impact on the Ocrevus sales forecasts already disclosed to the market.
