Investment strategy

A responsible and opportunistic selection of European bonds based on proprietary ESG analysis

Sycamore Sélection Crédit aims to deliver financial returns above those of the Barclays Capital Euro Corporate ex-Financial Bonds (reinvested coupons) over a minimum investment horizon of five years, within a modified duration range of 0 to +5, by applying a socially responsible investment process. The fund also aims to outperform its benchmark on the Net Environmental Contribution (NEC) indicator and on the 3-year headcount variation indicator, to select durable companies, particularly on environmental and/or contribution to employment criteria.

Fund commentary

The ECB initiated its rate cutting cycle at the beginning of June and brought its refinancing rate back down to 4.25%. However, the central bank remains 'data dependent': inflation will need time before it settles at around 2%. In May, core inflation in the Eurozone re-accelerated, rising to 2.9% year-over-year. June was marked by Macron's surprise decision to dissolve the French Parliament. The OAT- Bund spread widened from 50 to 80 bp, pulling the BTP-Bund spread in its wake. Ten-year yields on French sovereign bonds are now above those of their Portuguese counterparts. Despite this surge in volatility and the 40bp widening of spreads on the High-Yield segment, the primary market for corporate bonds remained very active across the full credit rating spectrum, allowing many French borrowers to issue bonds in favourable conditions. Examples include Tereos and Infopro Digital within the High-Yield segment. To everyone's surprise, Picard refinanced its debt maturing in 2026 with a 2029 bond bearing a higher coupon (+250 bp). Picard displays a 'B' credit rating.

Sustainable development goals exposure

This chart represents the main exposures to the United Nations Sustainable Development Goals and their 169 targets. Exposure is defined as the opportunity, for each company, to contribute positively to reaching SDGs, providing their products and services. This exercise doesn't aim to measure the companies effective contribution to SDGs, which is computed through our societal contribution (CS) and net environmental contribution (NEC) metrics. For each invested company, activities are analysed in order to identify those which are exposed to SDGs. For a same activity, its number of targets can vary between 0 and 2. The company target exposure to one of its activities is weighted by the revenue share gained from this activity. For more details, our annual SRI report is available in our ESG documentation.

ESG follow-up, news and dialogue

Dialogue and engagement

Renault

During our recent meeting with management, we discussed the circular economy within the group: 85% of the components used for vehicles manufactured by the group can be recycled. The percentage of recycled materials used in new vehicles is only 30%, as recycled materials sometimes fail to meet the technical resistance standards imposed by the group's safety criteria. Aluminium was cited as an example.
