Investment strategy

A responsible selection of international companies that meet today's social challenges

Sycomore Social Impact is a feeder fund for Sycomore Global Social Impact (master fund). The fund invests in companies that have a positive impact on social issues, such as those highlighted by the United Nations' Sustainable Development Goals. We are convinced that companies that respond to current social challenges are the most likely to generate sustainable operational and financial performance. Stock selection is based on a rigorous fundamental analysis that integrates sustainable development issues with a predominantly social dimension. This analysis is based on our SPICE model and our proprietary metrics associated with the different stakeholders that make up society (Consumers, Employees and Communities); the Social Contribution, the Happy@Work rating and the Good Jobs Rating. The investment universe is global, with no capitalisation size constraints.

Fund commentary

Global markets experienced another volatile month in April, as geopolitical tensions and high energy prices heightened inflation concerns and led investors to reassess interest rate expectations. Equity markets showed resilience overall, supported by solid corporate fundamentals, although sector and style divergence remained pronounced. Information technology and selective growth sectors outperformed, while defensive and interest-rate-sensitive sectors lagged. U.S. equities proved relatively resilient, while European and Asian markets posted more mixed results. Emerging markets generally outperformed their developed counterparts. Against this backdrop, the Fund outperformed its benchmark during the month.

ESG follow-up, news and dialogue

Dialogue and engagement

Antofagasta

We initiated an exchange on sustainability topics with Antofagasta. Discussions covered corporate culture, health and safety, IED and compensation. The company is constructive and highlighted several good human capital practices, including zero fatal accidents and benefits that often exceed legal requirements in Chile. On the environmental front, SBTi submission, Scope 3 framing and TNFD progress were discussed.

Engie

At Engie, progress in terms of avoided emissions stalled in 2025 due to methodologies that are still immature and currently being improved. Exposure to the Middle East does not currently have a significant impact. Capital expenditure in the gas sector mainly concerns maintenance, while the strategy remains focused on electricity, storage and long-term decarbonization, despite certain uncertainties.
