Investment strategy

A responsible and opportunistic selection of Investment Grade bonds based on a proprietary ESG analysis

Sycomore Environmental Euro IG Corporate Bonds aims to outperform the Bloomberg Euro Aggregate Corporate Ex-Financials TR index over a recommended minimum investment period of 3 years by investing in bonds issued by companies whose business model, products, services or production processes make a positive contribution to the challenges of energy and ecological transition through a thematic SRI strategy.

Fund commentary

Euro sovereign rates remained rather stable in November. The risk premiums on French and Italian bonds fell back. Fears of a bubble forming on artificial intelligence caused volatility on risk assets to rise and spreads widened a little during the month. The market expects ECB rates to remain stable over the next few months. In contrast, hopes of rate cuts by the Fed proved volatile, with investors now expecting a rate cut at the December meeting, followed by two further cuts in 2026. The primary market remained dynamic, both within the Investment Grade and High-Yield segments. Nextera, one the leading power companies in the US which manages large renewable energy infrastructure based on a largely regulated business model, issued a hybrid bond with a first call date in 5 years and bearing a coupon of 4% and rated BBB.

SPICE*, for Society & Suppliers, People, Investors, Clients, Environment is our tool for assessing a company's performance on sustainability criteria. This tool incorporates the analysis of economic, governance, environmental, social, and societal risks and opportunities covering both the company's daily operations and its product and service offer.

The analysis process covers 90 criteria and leads to a rating per letter. These 5 ratings are weighted based on the company's most material impacts.

Environmental analysis

Net Environmental Contribution (NEC)**

Degree of alignment of economic activities with the ecological transition, integrating biodiversity, climate and resources, on a standard scale from -100% for total misalignment to +100% for complete alignment, where 0% corresponds to the world economy average. The results are calculated by Sycomore AM or by the nec-initiative.org based on data for the years 2022 to 2024 according to NEC 1.0 or 1.1.

Sustainable development goals exposure

This chart represents the main exposures to the United Nations Sustainable Development Goals and their 169 targets. Exposure is defined as the opportunity, for each company, to contribute positively to reaching SDGs, providing their products and services. This exercise doesn't aim to measure the companies effective contribution to SDGs, which is computed through our societal contribution (CS) and net environmental contribution (NEC) metrics. For each invested company, activities are analysed in order to identify those which are exposed to SDGs. For a same activity, its number of targets can vary between 0 and 2. The company target exposure to one of its activities is weighted by the revenue share gained from this activity. For more details, our annual SRI report is available in our ESG documentation.
