Investment strategy

A responsible and opportunistic selection of Investment Grade bonds based on a proprietary ESG analysis

Sycomore Environmental Euro IG Corporate Bonds aims to outperform the Barclays Capital Euro Corporate ex-Financials Bond TR index over a recommended minimum investment period of 3 years by investing in bonds issued by companies whose business model, products, services or production processes make a positive contribution to the challenges of energy and ecological transition through a thematic SRI strategy.

Fund commentary

The upward pressure on long-term rates continued into the first half of January. Ten-year yields on US Treasury bonds almost reached 4.80%, before retreating during the second half of the month. Yields on 10-year German bonds followed a similar trend, fuelled by rising inflation forecasts. The risk premium on France and on peripheral sovereign issuers declined. Spreads narrowed during the month: A and BBB-rated bonds contracted around 5 bp. This occurred despite the market volatility fuelled by news flow on the Chinese AI model, DeepSeek. Orsted announced impairment losses of €1.6 billion on account of delays to its US offshore wind projects. This naturally weighed on the issuer's premium. The fund's exposure to Orsted stands at 0.4% via a hybrid bond callable in 2029 and yielding 4.8%, which we believe largely offsets the risks associated with the business. The primary market has reopened. We subscribed to the issue of Adif - Alta Velocidad, Spain's state-owned high-speed rail infrastructure operator. The bond, rated Baa2 / A- by Moody's and S&P and maturing in 10 years, offered a yield of 3.70%, i.e. 40bp above the yield on the Spanish sovereign bond.

SPICE, for Society & Suppliers, People, Investors, Clients, Environment is our tool for assessing a company's performance on sustainability criteria. This tool incorporates the analysis of economic, governance, environmental, social, and societal risks and opportunities covering both the company's daily operations and its product and service offer.

The analysis process covers 90 criteria and leads to a rating per letter. These 5 ratings are weighted based on the company's most material impacts*.

Sustainable development goals exposure

This chart represents the main exposures to the United Nations Sustainable Development Goals and their 169 targets. Exposure is defined as the opportunity, for each company, to contribute positively to reaching SDGs, providing their products and services. This exercise doesn't aim to measure the companies effective contribution to SDGs, which is computed through our societal contribution (CS) and net environmental contribution (NEC) metrics. For each invested company, activities are analysed in order to identify those which are exposed to SDGs. For a same activity, its number of targets can vary between 0 and 2. The company target exposure to one of its activities is weighted by the revenue share gained from this activity. For more details, our annual SRI report is available in our ESG documentation.
