Fund commentary

The Fed lowered its key rates by 25 bp, as widely anticipated, and the market is expecting two further cuts before the end of the year. In contrast, the ECB has left its rates unchanged and is rather more optimistic on growth within the Eurozone; however, the central bank has not issued any signals regarding its monetary policy over the next few months. Spreads have narrowed across the credit spectrum, causing the High-Yield segment to outperform better-rated issuers. In particular, the downgrade of France and the upgrade of Spanish and Italian credit ratings had little impact on corporate debt risk premiums. The primary market stayed very dynamic in September. Swiss operator Matterhorn, owned by Xavier Niel, issued a 5-year bond to finance the purchase of majority stakes in Monaco Telecom: the yield came in close to 4%, with a BB rating. Gestamp, the Spanish automotive supply manufacturer, specialised in bodywork, was also able to refinance its short-term debt with a BB rated 5-year bond yielding 4.40%. Unibail re-issued a hybrid bond bearing a first call date in June 2031. The coupon stood at 4.75%, for a Ba1/BBB- credit rating.

Sustainable development goals exposure

This chart represents the main exposures to the United Nations Sustainable Development Goals and their 169 targets. Exposure is defined as the opportunity, for each company, to contribute positively to reaching SDGs, providing their products and services. This exercise doesn't aim to measure the companies effective contribution to SDGs, which is computed through our societal contribution (CS) and net environmental contribution (NEC) metrics. For each invested company, activities are analysed in order to identify those which are exposed to SDGs. For a same activity, its number of targets can vary between 0 and 2. The company target exposure to one of its activities is weighted by the revenue share gained from this activity. For more details, our annual SRI report is available in our ESG documentation.
