Fund commentary

Credit spreads remained stable within the Investment Grade segment and narrowed slightly in the High-Yield universe. However, rising sovereign yields pushed credit into negative territory. Inflation continued to ebb in the Eurozone. The most recent data from Germany point towards a 2.2% price rise, a level that is very close to the ECB's target, indicating to the markets that a rate cut can be expected in June. The primary market remained active within the Investment Grade segment. We steered clear of the issuances on offer, as we felt their premia were too low in comparison with the secondary market.

Sustainable development goals exposure

This chart represents the main exposures to the United Nations Sustainable Development Goals and their 169 targets. Exposure is defined as the opportunity, for each company, to contribute positively to reaching SDGs, providing their products and services. This exercise doesn't aim to measure the companies effective contribution to SDGs, which is computed through our societal contribution (CS) and net environnemental contribution (NEC) metrics. For each invested company, activities are analysed in order to identify those which are exposed to SDGs. For a same activity, its number of targets can vary between 0 and 2. The company target exposure to one of its activities is weighted by the revenue share gained from this activity. For more details, our annual SRI report is available in our ESG documentation.
