## Investment strategy

### A responsible and opportunistic selection of Investment Grade bonds based on a proprietary ESG analysis

Sycomore Environmental Euro IG Corporate Bonds aims to outperform the Bloomberg Euro Aggregate Corporate Ex-Financials TR index over a recommended minimum investment period of 3 years by investing in bonds issued by companies whose business model, products, services or production processes make a positive contribution to the challenges of energy and ecological transition through a thematic SRI strategy.

### Fund commentary

The outbreak of the war in Iran on February 28th caused a broad correction across risk assets, including sovereign bonds, which retreated sharply. The 5-year risk premia on French and Italian debt versus Germany widened by 13 and 27 bp respectively. Spreads on BBB corporate bonds rose by around 15 bp. High-Yield bonds saw their spreads widen by 50 bp. B-rated bonds underperformed their BB counterparts. The latter now display a yield-to-worst around 5%. Central banks were unable to supply more details on their short-term decisions. The ECB's speech was perceived as rather hawkish, preventing long-term yields from easing. The market is expecting around three interest rate hikes in 2026 for the Eurozone - a rational forecast considering that 10-year inflation expectations are once again topping 2%. Although volatility is hindering appetite for risk, South Power Networks - which operates three licensed electricity distribution networks in the United Kingdom and was recently bought out by Engie - issued a 12-year bond rated A-, paying a coupon of 4.10%.

## Sustainable development goals exposure

This graph represents the main exposures to the United Nations Sustainable Development Goals. Exposure is defined as the opportunity, for each company, to contribute positively to reaching SDGs, providing their products and services. This exercise doesn't aim to measure the companies effective contribution to SDGs, which is computed through our societal contribution (CS) and net environmental contribution (NEC) metrics. A company may be exposed to several SDGs to varying degrees: strongly aligned, aligned, neutral, not aligned, or strongly not aligned. The methodology is based on data provided by MSCI. For more details, our annual SRI report is available in our ESG documentation.

**No significant exposure :** 8% *% of companies with no exposure (neutral)*  
**Non-alignment :** 20% *% of companies misaligned or strongly misaligned*

## ESG follow-up, news and dialogue

### Dialogue and engagement

#### Veolia

Veolia is making rapid headway with its GreenUp objectives: decarbonation, water saving and advanced depollution (PFAS in particular). The company's exit from coal is almost complete in Europe, with substantial financial rewards, however, the transition is proving difficult outside of Europe owing to the lack of alternatives and the price of CO2. Biodiversity plans have been deployed across 80% of the sensitive areas and restoration initiatives have also been implemented.
