Investment strategy

A responsible and opportunistic selection of €-denominated Investment Grade bonds based on a proprietary ESG analysis.

Sycamore Euro IG Short Duration invests in €-denominated Investment Grade bonds with maturities of 0 to 5 years (with a minimum of 50% of net assets invested in maturities of 0 to 3 years), over a minimum investment horizon of two (2) years. No more than 10% of the net assets may be invested in high-yield securities. Similarly, investments in unrated securities will not represent more than 10% of the net assets.

The investment strategy consists of a rigorous selection of bonds and other debt securities denominated in euros, issued by private or public-sector issuers and similar entities, to which the Fund will be exposed at all times between 60% and 100% of the net assets, including a maximum of 20% of the net assets for public-sector issuers and similar entities, with no sector or geographical allocation restrictions (with the exception of exposure to non-OECD countries, including emerging countries, limited to a maximum of 10% of the net assets).

Performance as of 30.04.2025

According to the current legislation, we cannot disclose the performance of a fund that has a reference period of less than 12 months. For further information, please contact our team.

Fund commentary

The tariffs announced during 'Liberation Day' on April 2nd caused risk assets to correct violently, as demonstrated by the 100 bp surge posted by the Crossover index. The more conciliatory stance later adopted by the Trump administration enabled the index to retrace 80% of its initial rise. With the decline of sovereign rates - the 5-year OAT fell 25 bp during the month - credit indices closed the month higher. The Investment Grade segment, where spreads only widened by 10 bp, outperformed High-Yield. The ECB lowered its rates by 25 bp as expected, while highlighting the macro risks weighing on the Eurozone and opening to the door to future cuts. This spike in volatility suspended the primary market, but the latter recovered at the end of the month. The US payments specialist Fiserv issued several tranches in euros: the 3-year bond was attractive, with a coupon of 3% and a BBB rating.

Environmental analysis

Net Environmental Contribution (NEC)

Degree of alignment of economic activities with the ecological transition, integrating biodiversity, climate and resources, on a standard scale from -100% for total misalignment to +100% for complete alignment, where 0% corresponds to the world economy average. The results are calculated by Sycomore AM or by the nec-initiative.org based on data for the years 2022 to 2024 according to NEC 1.0 or 1.1.

Coverage rate : fund 88% / index 82%

Fossil fuel exposure

Share of revenues from activities linked to fossil fuels from upstream to energy production, supplied by S&P Global.
