Investment strategy

A responsible and opportunistic selection of €-denominated Investment Grade bonds based on a proprietary ESG analysis.

Sycamore Euro IG Short Duration invests in €-denominated Investment Grade bonds with maturities of 0 to 5 years (with a minimum of 50% of net assets invested in maturities of 0 to 3 years), over a minimum investment horizon of two (2) years. No more than 10% of the net assets may be invested in high-yield securities. Similarly, investments in unrated securities will not represent more than 10% of the net assets.

The investment strategy consists of a rigorous selection of bonds and other debt securities denominated in euros, issued by private or public-sector issuers and similar entities, to which the Fund will be exposed at all times between 60% and 100% of the net assets, including a maximum of 20% of the net assets for public-sector issuers and similar entities, with no sector or geographical allocation restrictions (with the exception of exposure to non-OECD countries, including emerging countries, limited to a maximum of 10% of the net assets).

Fund commentary

The prospect of a trade agreement between the United States and several of its partners, such as Europe and Japan, allowed for a positive market environment in July. In the absence of decisions from central banks, markets are hanging on for the Fed to lower its rates and for the ECB to make its final 25-bp cut. Yield curves continued to steepen amid lower demand for sovereign bonds. In contrast, corporate bonds remain very popular with investors and credit spreads have contracted further. This affected both categories, Investment Grade as well as High Yield. Capital flows from investors were also elevated, clearly supporting corporate bond valuations. The first corporate earnings publications demonstrated the resilience of auto equipment manufacturers, including Forvia and OP Mobility, as well as continued profitability growth within the financial sector. The real estate sector (Vonovia, Altea) is also recovering gradually.

Environmental analysis

Net Environmental Contribution (NEC)

Degree of alignment of economic activities with the ecological transition, integrating biodiversity, climate and resources, on a standard scale from -100% for total misalignment to +100% for complete alignment, where 0% corresponds to the world economy average. The results are calculated by Sycomore AM or by the nec-initiative.org based on data for the years 2022 to 2024 according to NEC 1.0 or 1.1.

Coverage rate : fund 89% / index 81%

Fossil fuel exposure

Share of revenues from activities linked to fossil fuels from upstream to energy production, supplied by S&P Global.
